

## **Move Azure Resources to another Resource Group**

### **(LAB-100-01-06)**

#### **Step 1: Move Azure Resources from Portal**

1. Access the Azure portal.
2. Go to left side, select **Resource Group**
3. Select [myresourcegroupdemops](#) resource group
4. Select [nsg1](#) network security group
5. On the top, select **Move**
6. From the dropdown, select **Move to another resource group**
7. Under **Move these resources to**, select [myresourcegroupdemocli](#) resource group
8. Select **I understand .....**
9. Select **Ok**  
Note: It will first validate & then initiate the move
10. Once you get successful notification, go to [myresourcegroupdemocli](#) resource group & check the resources

#### **Step 2: Move Azure Resources from Portal from Azure PowerShell/CloudShell**

1. Access the Cloud Shell or Azure PowerShell
2. Get a list of resources with the resource ID  
[Get-AzResource](#)
3. Copy the resource id of **nsg2**
4. Move [nsg2](#) network security group resource to another resource group. If prompt for Yes, provide **Y** to proceed  
[Move-AzResource -DestinationResourceGroupName myresourcegroupdemops -ResourceId <nsgResourceId>](#)

Note: Replace the nsgResourceId with the Id you copied earlier. Also execute above command in one line

5. Once you get successful notification, view the resources details  
[Get-AzResource](#)
