Configure Network Settings for Azure Windows VM
(LAB-103-02-02)

Part A: Create Windows Virtual Machine

1. Use the Azure Virtual Machine **vm01-1030401**

Part B: Configure Static Public IP Address

1. From the Azure Portal, go to the left menu, select **vm01-1030401** Virtual Machines

2. Select the "***Overview***" under settings

3. Click on "***Public IP Address***"

   It will open the new blade. Here you will see the blade showing you Public IP Address assigned as Dynamic

4. Select assignment as "***Static***" and "***Save***", wait for few mnts.

   Once network setting saved, you will see the blade showing you Public IP Address assigned as Static

5. Don't close the blade, continue to Part C

Part C: Configure DNS

1. Give unique name under "***DNS Label Name***".

2. Once it shows Green Click on the right side, Press "***Save***", wait for few mnts.

   Once network setting saved, close the blade

3. Select the "***Overview***" under settings.

   Here you will see the DNS name assigned to your virtual machine

Part D: Configure Static Private IP Address

1. From the Azure Portal, go to the left menu, select **vm01-1030401** Virtual Machines

2. Select the "***Networking***" under settings

3. Select the name of Network Interface

4. Select "***IP Configuration***"

   Here you will see the blade showing you Private IP Address assigned as Dynamic

5. Click on the Private IP Address showing as Dynamic

6. Select assignment as "***Static***" under Private IP address settings

7. Select "***Save***", wait for few mnts.

8. Once network setting saved, close the blade.

9. Select "***IP Configuration***"

   Here you will see the blade showing you Private IP Address assigned as Static
